Subject: Updates - Items 2 - 210722

Additional context for the alleged Bramlette Area PAH source, and immediate downstream Unity Park currently under construction.

The point graph clearly shows the 'spike' in PAHs at Bramlette, trailing downstream. This is EPA/SCDHEC's 2020 data.

The two aerial images show the drainage from the MGP parallel to the river, and discharging to the river just above Willard St. That ditch (Drainage Ditch #5) is 'smokin hot' with PAHS, even the suspended flow, continuously discharging as an unpermitted discharge of hazardous substances.

This is a key item for discussion.

Last images show the new Unity Park construction immediately downstream from DD#5 (ground zero), in the midst of an EJ community. And the huge amount (thousands of tons) of highly suspect riverbank sediment recently removed from the scene, smeared around the park, and transported to who-knows-where?

Fascinating!

Dave
